EDUCATION

London Metropolitan University

Sep 2019 - Oct 2022

Bachelor of Science with Honours in Computing

- First Class Honours, 75.06%

EXPERIENCE

Mid-Level Software Engineer | *Innovate Tech* (Jul 2025 - Present)

- Leading the decoupling of an ASP.NET Boilerplate (ABP)-based application to transition toward a framework-independent architecture to align with the latest LTS.
- Refactoring the codebase and streamlining the project dependency graph, including Dockerfile and CI YAML configurations, resulting in significantly faster builds and application startup times, also reduced build size.
- Decoupled database migrations into a separate project, proposing to implement a migration squashing strategy.
- Configured Forwarded Headers to accurately track client IPs across a multi-hop infrastructure (Client -> Cloudflare -> AWS ALB -> Application).
- Working extensively with data-intensive queries, transforming data into export formats (Excel, CSV), and building background job workflows including cron-based recurring, delayed, and fire-and-forget jobs.
- Improved debugging experience by migrating from Log4Net to Serilog, implementing structured logging (ANSI console format for local and CLEF for production), enabling request logging with proper redaction, overriding environment-based minimum log levels, and building LogQL-powered Grafana dashboard to accelerate QA resolution.
- Designed and implemented event-driven assignment archival workflows using AWS Lambda, with SQS-triggered processing orchestrated by Hangfire scheduled jobs aligned to assignment deadlines; handling submission retrieval from S3 to EFS, structured packaging, and secure distribution via pre-signed URLs, with notifications via SNS and FCM.

Associate Software Engineer | *Innovate Tech* (Jun 2024 - Jul 2025)

- Working on E-Learning platforms like mySecondTeacher and HighSchool.Asia primarily in .NET backend side.
- Refactoring and optimizing existing codebases and queries for improved performance.
- Maintaining RESTful APIs and gRPC services.
- Collaborating with QA teams on load testing (JMeter), bug resolution, and functional test planning.
- Collaborating closely with the Project Manager, Team Lead, and colleagues to implement new requirements and support code refactoring efforts.
- Migrating .NET 6 codebase to .NET 8.
- Conducting PR reviews and mentored team members on code quality.
- Configured Docker Compose for observability with Grafana, Loki, Tempo, Prometheus, and Jaeger, adhering to the OpenTelemetry Protocol (OTLP).
- Integrated Serilog (OTLP sink) for structured logging and Seq for local debugging.
- Implemented MediatR caching behavior using IDistributedCache after evaluating FusionCache, Redis OM, and Hybrid-Cache.
- Designed IQueryable/IEnumerable filter extensions for pagination and sorting to optimize data retrieval.
- Implemented cron-scheduled (EventBridge, pg_cron) AWS Lambda function with PL/pgSQL TVFs and ETL SPs for batch weekly email notifications.
- Centralized package management and NuGet dependency updates to ensure compatibility.
- Replaced Swagger UI with Scalar during R&D, integrating and testing multiple OpenAPI specification documents.
- Applied resolver pattern in purchase callback handler to dynamically dispatch appropriate notifications and emails.
- Implemented a global exception handler middleware for validation, gRPC, and custom exceptions.
- Implemented Unit of Work (UoW), Generic Repository, MediatR behavior (Transaction Scope: auto-commit/rollback), custom SaveChangesInterceptor (auditing, soft deletion).
- Implemented MediatR pipeline behaviors for security:
 - Anti-IDOR to enforce strict authorization checks.
 - Anti-XSS with compiled regex validation and input sanitization.

Associate Software Engineer (Part-Time) | *Innovate Tech* (Mar 2024 - Jun 2024)

- Majorly worked on bug fixes.
- Implemented support issues and feature requirements.

FYP Supervisor | *Islington College* (Sept 2023 - Feb 2026)

- Internal Supervisor for Project (FYP) [CS6P05] module.
- Supervising a group of FHEQ level-6 undergraduate students, collaboratively with External Supervisor, through mentorship and guidance, throughout the entire FYP process, from project proposal to completion.
- Conducting weekly classes to track progress, address challenges/difficulties and provide valuable constructive feedback.
- Collaborating with students to identify relevant resources, tools, and technologies for their projects.

Assistant Lecturer | *Islington College* (Dec 2024 - Feb 2026)

- Delivering lectures to undergraduate students for the Application Development (CS6004) module, focusing on the .NET stack — primarily .NET MAUI Blazor Hybrid, Web API, and related technologies.
- Refactoring and updating lecture slides, content delivery, and course materials to align with .NET 8 (previously .NET 6).

Module Leader | *Islington College* (Feb 2024 - July 2024)

- Designing and updating the module content.
- Academic contact point for students.

Module Administrator | *Islington College* (Aug 2023 - Feb 2024)

- Administering Application Development [CS6004] module.
- Close communication and collaboration with Module Leader, for follow-up commands and actions, for the module specifics.
- Conducting module-related internal meetings with individuals of ING Colleges (ICK, IIC, ICP).
- Designing, reviewing, and delivering Module Handbook and Academic Assessments: Individual/Group Coursework and MCQs.

Academic Tutor | *Islington College* (Dec 2022 - Feb 2025)

- Guiding students in CS4001 Programming (discont.) and CS6004 Application Development modules through tutoring sessions, fostering their understanding of key concepts.
- Contributed as a Guest Supervisor for the Final Year Project VIVA 2022-23, providing evaluation and valuable insights to students in their project assessment.
- Delivered lectures and tutorial classes on Academic Misconduct as part of the UPC (University Preparation Course), promoting ethical conduct and academic integrity among students.

Graduate Teaching Assistant | *Islington College* (Nov 2022 - Dec 2022)

- Collaboratively Guided students in tutorial/workshop classes of CS4001 Programming and CS6004 Application Development with tutors through assistant-ship.
- Supervised the College Interns from Computing Specialization.

Full-stack Developer (Intern) | *Islington College* (Sep 2021 - Feb 2022)

- Collaboratively developed web-based Student Profiling System prototype project in a group of 10.
- Deployed the application in the college intranet and tested by the higher academic officials.

Student Counselor | *Islington College* (Nov 2021 - Dec 2021)

- Provided personalized counseling on available IT courses.
- Addressed academic and career concerns, offering guidance to prospective 2022 spring intake students.

Undergraduate Teaching Assistant | *Islington College* (Sep 2021 - Dec 2021)

- Assisted in workshop classes for the CS4001 Programming module.
- Contributed to the establishment of an AI Club.
- Volunteered for skill events and played a role in designing and creating the club's logo, flyer, and presentations.

PROJECTS

Sasae

- Developed an interactive social service application, promoting collaboration among NGOs and social advocates to catalyze social change by facilitating networking, engagement through features like "Poke," "Polls," and "Petitions," and streamlining the donation process to NGOs.
- Flutter, Django, Django Rest, MySQL, HTML/CSS/JS, Bootstrap, Heroku, Cloudinary, Git, GitHub

Flutter Polls

- Contributed in an open-source project that aims to provide customizable poll for Flutter apps.
- Achieved over 90% popularity at pub.dev repository.

Phat

- Developed a console-based chat application built using a full-duplex protocol: TCP to send and receive messages between any two connected users simultaneously with re-connect policy.
- C#.NET, TCP WebSocket

Appliance IMS

- Developed an Inventory Management System that can be used by a store clerk to efficiently manage the recorded appliances information.
- Java, Java Swing, Java Database Connectivity (JDBC), MySQL

rs-cf-ub-knn

- Developed an Anime Recommendation System based on User-based Collaborative Filtering technique and KNN(Euclidean Distance) algorithm.
- Python, Pandas, SciPy, scikit-learn, Sweetviz, Kaggle

ADDITIONAL

- Certifications: Software Architecture: Domain-Driven Design Agile Software Development Clean Code AWS Academy Graduate - AWS Academy Cloud Foundations SignalR Mastery: Become a Pro in Real-Time Web Development Become a Django Developer The Bits and Bytes of Computer Networking Building Cloud Services with the Java Spring Framework Object Oriented Programming in Java Specialization Parallel and Concurrent Programming with Java 1 Technical Support Fundamentals Developing Front-End Apps with React
- Programming Languages: C#.NET, Java, Dart, Python
- Markup Languages: XML, JSON, HTML, Latex, Markdown, PlantUML
- Front-end Frameworks: Flutter, Blazor
- Back-end Frameworks: ASP.NET Core, Django, Django REST
- Databases: PostgreSQL, SQLite, MySQL, Oracle SQL
- Cloud: AWS, Firebase
- Language Skills: English (fluent), Nepali (native), Hindi (conversational)
